# Weekly Coal Production

Production for Week Ended:  
November 29, 1986

# Highlights

U.S. coal production in the week ended November 29, 1986, as estimated by the Energy Information Administration, totaled 14.24 million short tons (bituminous coal and lignite, 14.17 million short tons; Pennsylvania anthracite, .07 million short tons). This was 23.9 percent lower than in the previous week, primarily east of the Mississippi, due to the Thanksgiving holiday and was 5.2 percent higher than production in the corresponding week of 1985.

Cumulative U.S. coal production from January 1 through November 29, 1986, was estimated at 812.85 million short tons, 0.1 percent below the 813.65 million short tons produced in the comparable period in 1985.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
